Dr. Anoop S. Mokha's engineering career has spanned from basic research on Friction Pendulum bearings to their implementation in important and critical industrial, bridge, and building structures worldwide.

As Vice President of EPS since 1999, Dr. Mokha has worked closely with Clients, Engineers, Architects, and Contractors for successful and cost-effective implementation of Friction Pendulum bearings in over 20 countries. Federal, state and local governments, as well as corporate clients such as Shell, Exxon, Texas Instruments, have saved hundreds of millions of dollars in construction costs with the creative and innovative seismic solutions provided by EPS engineers.

During his 10 year tenure as Structural Engineer at Skidmore, Owings, & Merrill, San Francisco, Dr. Mokha lead the project team for the design and implementation of Friction Pendulum bearings for the New San Francisco International Terminal building and the retrofit of an Historic Landmark Building, the U.S. Court of Appeals in San Francisco.

In 1990, Anoop was awarded a Doctor of Philosophy Degree in Structural Engineering from the State University of New York at Buffalo, New York. His Ph.D. thesis, which was supervised by Prof. Michael C. Constantinou, was on the Experimental and Analytical Study of Sliding Isolation Systems with emphasis on Friction Pendulum Bearings. His doctoral qualifying examination committee included well known Professors Robert Ketter, Ian Buckle, and Andrei Reinhorn.

In 1985, his interest in earthquakes convinced him to join the Indian Institute of Technology, Roorkee, India, the only institute in Asia then offering a graduate degree in Earthquake Engineering. He graduated with a Masters Degree in Structural Dynamics with honors and earned a research position at the University of Pennsylvania, Philadelphia. He received another Masters Degree in Structural Engineering in 1987.

In 1983 Anoop Mokha completed his undergraduate degree in Civil Engineering from the Regional College of Engineering, Nagpur, India. He received a Gold Medal for first place standing in all 8 semesters, the only such accomplishment in the history of the Engineering College.

Dr. Anoop Mokha is a Licensed Structural Engineer and Professional Engineer in the State of California. He has given numerous invited presentations and has co-authored over 50 publications in respected journals and a variety of engineering conferences.
